SENAI: 17/01/2017

Systems Analyst:

Responsible for the development of back-end systems using Laravel and MySQL, among the projects created are Intranets, API consumption, portals and institutional sites.

In addition to Laravel, I also work with WordPress on news portals, educational institution websites, systems integration, SOAP, multisites and blogs.

The main technologies used are: PHP, .NET, Laravel, WordPress, MySQL, Microsoft SQL Server, SASS, CSS, React, VueJS, Javascript, jQuery, Twitter Bootstrap, Tailwind, HTML, Git and Git Flow.

FIESP: 2017/2021

PHP Developer:

Responsible for the development of back-end systems using Laravel and MySQL, among the

projects created are Intranets, apis consumption, portals and institutional websites.

In addition to Laravel, I also work with WordPress on news portals, subscription sites, institutional sites, systems integration, SOAP, multi sites and blogs.

The main technologies used are: Laravel, WordPress, MySQL, jQuery, Twitter Bootstrap, CSS, HTML, Webpack, git.

Criarenet: 2015/2017

PHP Developer:

Responsible for the development and maintenance of portals, online stores, blogs, institutional websites, intranets, cash flow systems, customer and plan management, medicine ordering system.

Technologies used: MySQL, Laravel, WordPress, Woocommerce, Twitter Bootstrap, Oracle, PostgreSQL, jQuery, HTML, CSS, consumption of APIs.

Din Digital Web: 2015/2015

Full Web Developer:

I worked with a CMS developed by the company, I used object-oriented PHP, MySQL database and also WordPress for some sites. Reason for leaving: Division of the company among the partners.

Reason for leaving: Division of the company among the partners.

Primecomm: 2014/2015

PHP Developer:

In this company I used Symfony, PostgreSQL, MySQL, Codeigniter, WordPress, jQuery, jQuery UI, CSS, HTML, GIT. I went to a project that aimed to create a points area for Atento and McDonalds employees, this area had a login system, blog, shopping, agenda and company news. In this system I used Symfony, MongoDB, jQuery, JQuery UI, CSS, HTML.

I also did some hotspots with WordPress and maintained the old systems of the company that used Codeigniter.

Freelancer: 2012/2014

At that time I decided to work as a freelancer and with that I had direct contact with the client where I could learn how to do the requirements survey, customer service, how to deliver part of the services for the client to see and keep calm and anxious about the project.

I worked with several projects and some startups, I had a great contact with the Google Maps api, creating systems using Codeigniter, jQuery, jQuery UI.

Take 5 Movies: 2011/2012

PHP Developer:

I worked a lot with WordPress, Codeigniter and legacy E-learning systems created by the company itself. I kept the same knowledge and skills.

ZAW: 2010/2010**PHP Developer:**

Created and updated legacy systems and created from scratch. I used Zend Framework 1, WordPress and Codeigniter a lot in the projects.

I also integrated with the post office and RPM of companies, used jQuery, jQuery UI, CSS, JavaScript, HTML, XHTML, MySQL, PostgreSQL, PHP procedural and object oriented.

Multisolution: 2008/2009**PHP Developer:**

Updated legacy code systems using PHP (procedural and object-oriented), MySQL, JavaScript, HTML and CSS.

I also used Zend Framework 1 and Codeigniter, in addition to updating I also participated in the creation of systems from scratch, most of the jobs were for creating hotspots, company websites, blogs and news portals.

I want to learn more, become a better and better professional and obtain financial growth, deliver quality projects and easy maintenance, share content and finally become a reference in the area.
